

Airline Hwy - Goodwood Blvd Area Rehabilitation Project (Phase 2)

City-Parish #11-AR-MS-0028

Project Start: **2nd Quarter 2013**
 Anticipated Project End: **1st Quarter 2015**

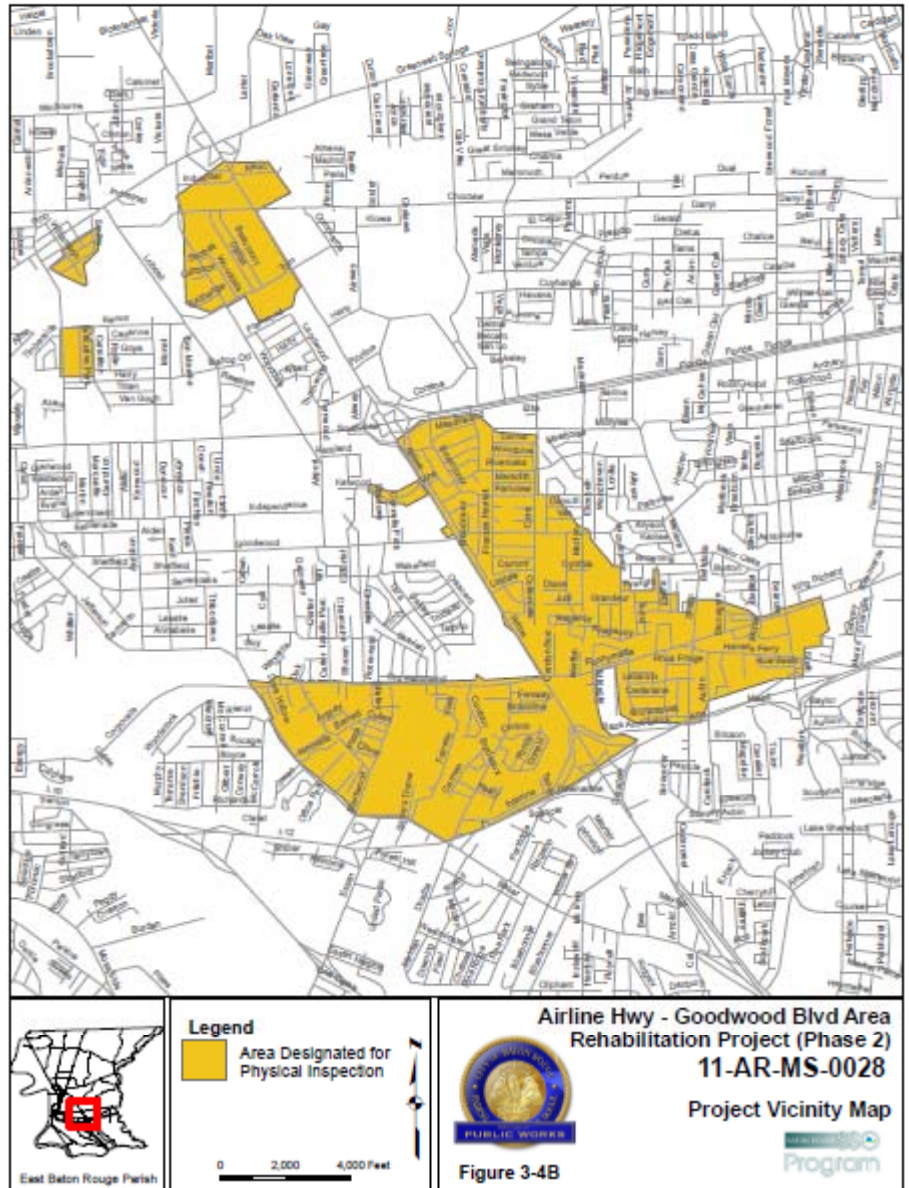

Rehabilitation of the sewer collection system is a comprehensive physical process that begins with cleaning and inspection of sewer pipes and manholes. Typical rehabilitation repairs include pipe and manhole replacement and trenchless technologies that minimize above ground disturbances, such as cured-in-place pipe liners.

One of the first steps in rehabilitation includes a physical inspection of manholes and pipes to identify blockages.

Simply cleaning the pipes and manholes in preparation for the physical inspection removes blockages, debris and roots.

Airline Hwy - Goodwood Blvd Area Rehabilitation Project Facts (Phase 2)

The construction of rehabilitation projects will typically include the following components. For this project:

- Approximately 288,770 linear feet of pipeline will be inspected and rehabilitated
- Approximately 1,187 manholes will be rehabilitated or replaced
