

Silverleaf Rd - Ford St Area Rehabilitation Project

City-Parish #10-AR-BD-0041

Advertisement for Bid: **1st Quarter 2011**
 Project End: **4th Quarter 2012**

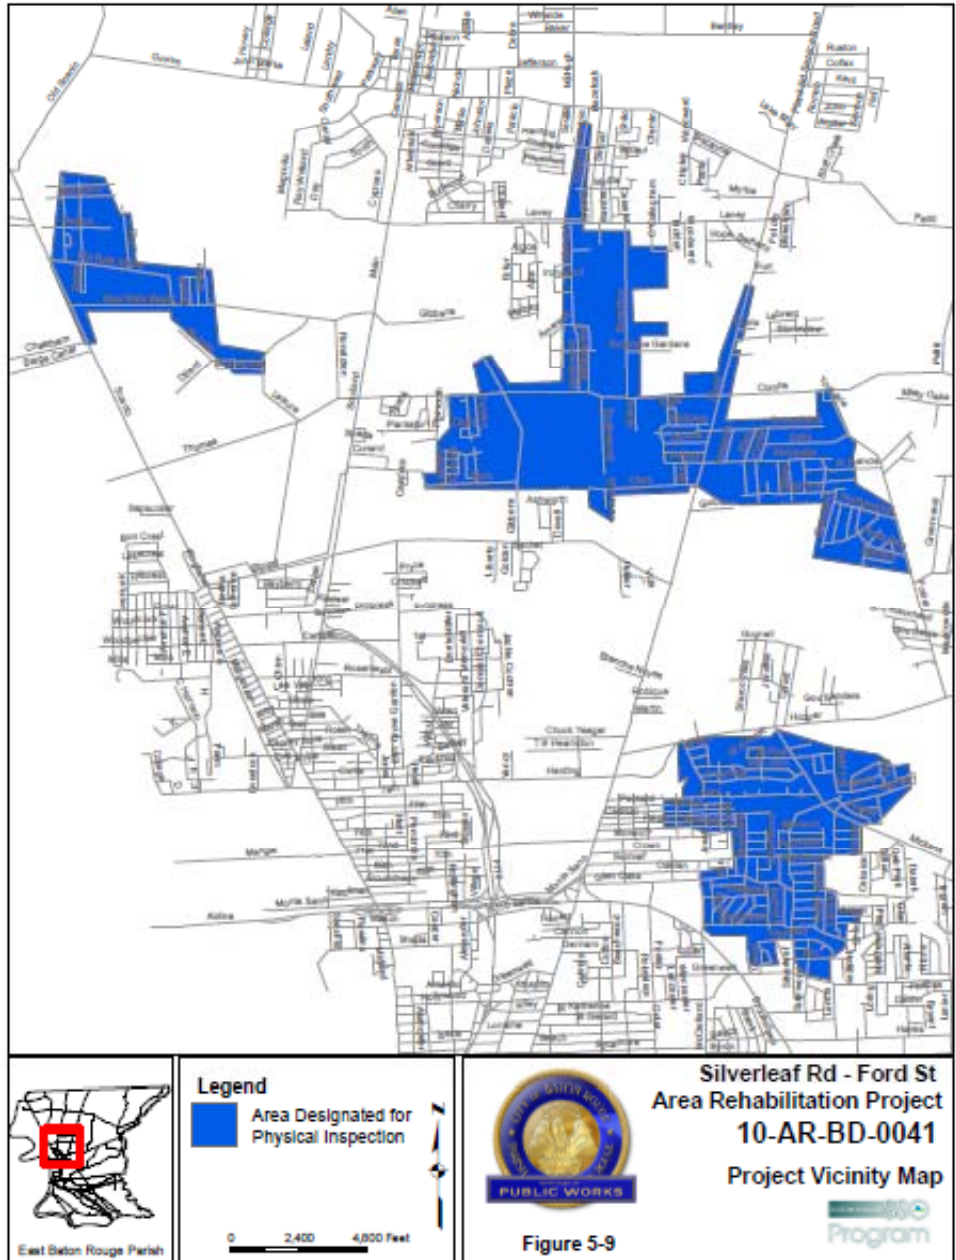

Rehabilitation of the sewer collection system is a comprehensive physical process that begins with cleaning and inspection of sewer pipes and manholes. Typical rehabilitation repairs include pipe and manhole replacement and trenchless technologies that minimize above ground disturbances, such as cured-in-place pipe liners.

One of the first steps in rehabilitation includes a physical inspection of manholes and pipes to identify blockages.

Simply cleaning the pipes and manholes in preparation for the physical inspection removes blockages, debris, and roots.

Silverleaf Rd - Ford St Area Rehabilitation Project Facts

For this project:

- Approximately 346,673 linear feet of pipeline were inspected and rehabilitated
- Approximately 1,349 manholes were rehabilitated or replaced

Design Consultant:

Program Rehab Mgmt Team

Construction Contractor:

John Plott Company

Estimated Construction Cost: \$7.5 M
